

**USE THIS ONE MACHINE AS A . . .**

# **PYRAMID ROLL INITIAL-PINCH ROLL DOUBLE-PINCH ROLL & EVEN AS A PRESS!**

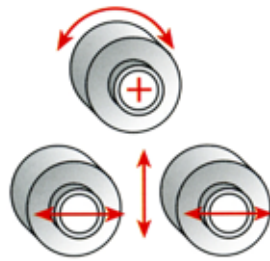

On these machines, the two lower rolls move horizontally so that their center distances can be adjusted; and the upper roll moves vertically; so the machine can be configured as best for any job, providing optimum bending, prebending and cone rolling. All functions are hydraulic. Features include: induction hardened rolls, three electronic digital readouts (one for each of the rolls), two speeds, cone bending attachment, extra-large openings between the upper and lower rolls to accept some thick, narrow plates and even some structurals, and easy retro-fit of optional overhead and side support devices if required after the machine has been put into operation. Options include overhead support, side supports and NC Control.

***THE STATE-OF-THE-ART BENDING ROLLS***
